

Slovenia, CPU

The Slovenia-based CPU found the combination of conference and workshop to be the best way to share and distribute information about the project on the 14th of June, 2022. The topic of innovations, motivation and technological cooperation was highlighted, good practices were mentioned, and experiences exchanged during the multiplier event. Many presenters came to share their knowledge from the business sector, who also involved the audience. Despite of the previous 2 years of the epidemic and the fast-approaching summer holiday, the participants expressed that they would be willing to devote time for in-person trainings developed by the consortium.
